

## Creating or Enhancing Software

- Creative solutions to difficult problems. We love a challenge.
- New software to enable you to get your work done. These could be at any level, or a combination of levels, from kernel or device driver software to client-server or web applications.
- Enhancements to existing tools to allow you to work faster and more efficiently. Most clients are constantly under pressure to accomplish more with less staff and at lower cost.
- Extensions to off-the-shelf software that doesn't do quite everything you need.
- Professional shell, PHP, and Perl scripting, C, C++, Objective-C, Java, SQL, web programming and much more.
- Custom software to share or convert data between packages or systems.

Please contact us to discuss your needs.
